EXPERIMENT

Title

TRIO

Description

Problem Statement:
Imagine you have three magical crystals, each with a number on it: X, Y, and Z.
You're on a magical adventure where you pick two crystals from a table. Your goal is to find the highest sum you can get by choosing two of these magical crystals, using their numbers to create the most powerful combination.

Input Format:
The first line of input contains three space-separated integers X,Y and Z.

Output Format:
Print the highest possible sum of the numerals inscribed on the chosen two crystals.

Constraints:
$1<=X,Y,Z<=10^8$

Sample Input:

1 2 3

Sample Output:

5

Source Code:

```
l=list(map(int,input().split()))
l.sort()
m1,m2=l[1],l[2]
print(m1+m2)
```

RESULT

5 / 5 Test Cases Passed | 100 %
